

# FIT3140 Assignment 5

## Iteration 2 goals

Here is a prioritized list of goals for Iteration 2.

These goals are *not* all fully fledged user stories. You should rewrite them as (one or more) user stories to put on your Trello board. Consult with your lab demonstrator or Nawfal or Chong (via email) if you need clarification.

Anyway, here is the prioritized list of goals

1. Finish the unfinished base functionality from Iteration 1.
2. Add support for numeric digits (0..9).
3. Add support for Punctuations Marks.
4. Stop the process at the server side if the Prosign 'SK, End of transmission' (SSSLSL) occurs.
5. Polish the client side interface (web page).
6. Allow the client side to stop and start the transmission process.

What you need to do for iteration 2

- Rewrite the above goals user stories. ( i.e. the pattern of “**as a user, I want**”)
- Split the user stories up further as appropriate.
- Put the split-up stories onto your Trello board, prioritize them, estimate their size (using T-shirt sizing of small/medium/large is fine), and mark them off once done (including recording time taken).
- Implement the iteration's stories.
